## PROFESSIONAL SUMMARY

---

Full Stack Engineer (React / Node.js) with 4+ years of production experience building scalable MERN web applications. Promoted from Frontend Developer to Software Engineer at Caprus IT. Delivered a 30% reduction in duplicate UI code, zero critical production regressions, and accessible interfaces across 5+ modules. Hands-on with AWS EC2, Nginx, PM2, and Razorpay. Skilled in reusable component design, MongoDB optimization, REST API design, and Agile delivery.

## TECHNICAL SKILLS

---

**Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3

**Frontend:** React.js, Next.js, Tailwind CSS, Bootstrap, Material UI, DaisyUI, Shimmer UI, Responsive Web Design, Accessibility (WCAG)

**Backend:** Node.js, Express.js, Socket.io, RESTful API Design

**Database:** MongoDB, Query Optimization, Data Modeling

**Cloud & DevOps:** AWS EC2, Nginx (reverse proxy, SSL), PM2 (process manager), Vercel, Render

**Payments:** Razorpay (test mode integration)

**Tools & Practices:** Git, GitHub, Postman, Jest, JWT, RBAC, MVC Architecture, Agile/Scrum

## PROFESSIONAL EXPERIENCE

---

### Caprus IT Pvt. Ltd.

Hyderabad, India

*Software Engineer (Promoted from Frontend Developer)*

*Jan 2022 – Present*

- Architected full-stack MERN applications for education and marketplace domains supporting 4 user roles and 5+ product modules in production.
- Built a reusable React component library and custom hooks suite — cut duplicate UI code by 30%, saving 2–3 days per sprint in feature development time.
- Developed and maintained RESTful APIs using **Node.js** and **TypeScript**, enforcing strict type contracts between the React frontend and Express.js backend — reduced type-related runtime errors to zero.
- Built responsive, mobile-first UI components using **Tailwind CSS** utility classes, replacing scattered custom CSS and ensuring consistent design tokens across all 5+ modules.
- Championed UI accessibility (WCAG), improving keyboard navigation and screen-reader compatibility across all modules.
- Designed granular RBAC for student, teacher, parent, and admin roles — permission-related bugs reduced to zero post-launch.
- Optimized high-traffic MongoDB queries and backend pipelines, cutting server response times by 40% on busiest endpoints.
- Maintained zero critical production regressions across 3+ years via systematic code reviews and edge-case test coverage.
- Unified state management and REST API layer across 5+ modules with zero cross-module data inconsistencies.

## KEY PROJECTS

---

### Aauti School — School Management System | *React.js, TypeScript, Node.js, MongoDB* | Caprus IT

- Delivered 4 role-based modules (student, teacher, parent, admin) with isolated workflows; cross-role access bugs reduced to zero.
- Automated notifications via cron-based email jobs, eliminating 100% of manual reminder workflows.
- Launched a full assignment lifecycle system (create, target, track), replacing manual processes for 100+ students and teachers.
- Embedded TinyMCE rich-text editor for in-app content creation; built a shared component library enforced across all 4 modules.

### Aauti Marketplace | *React.js, TypeScript, Node.js, Express.js, MongoDB* | Caprus IT

- Launched a multi-vendor digital marketplace with category-based search for service providers and consumers.

- Engineered a timezone-aware coupon engine that auto-activates discounts per user timezone — removed 100% of manual geo-promotion overhead.
- Built tiered pricing and package discount system; secured with end-to-end JWT authentication — zero auth vulnerabilities since launch.

#### **DevHive — Developer Networking Platform** | *React.js, Node.js, Express.js, Socket.io, MongoDB, JWT, Razorpay, AWS*

- Frontend | Backend — Personal Project
- Built a full-stack developer networking platform with swipe-based profile matching, authentication, and connection management from scratch.
- Designed scalable backend architecture (Node.js / Express.js) to handle concurrent real-time users with Socket.io-based 1-on-1 chat (sub-100ms delivery).
- Integrated Razorpay payment gateway (test mode) — order creation, payment verification, and webhook handling.
- Deployed React SPA on AWS EC2 + Nginx (reverse proxy, SSL); deployed Node.js backend on AWS EC2 + PM2 (process management, auto-restart, zero-downtime).

### KEY ACHIEVEMENTS

---

- Promoted from Frontend Developer to Software Engineer at Caprus IT — recognised for full-stack ownership, accessibility work, and consistent delivery.
- 30% reduction in duplicate UI code via reusable React component library — saved 2–3 days of development time per sprint.
- Zero critical production regressions over 3+ years through systematic peer reviews and comprehensive test coverage.
- 40% reduction in server response times via MongoDB query optimisation on highest-traffic endpoints.
- Zero design-deviation issues post-launch — saved an estimated 4–6 hours of rework per release cycle.
- Independently managed end-to-end AWS EC2 deployment (Nginx + PM2), bridging developer and DevOps responsibilities.

### EDUCATION & CERTIFICATION

---
